

COMMONWEALTH OF PENNSYLVANIA

HOUSE RESOLUTION 167
TASK FORCE

PENNSYLVANIA STATE POLICE
COVERAGE TO MUNICIPALITIES

PENNSYLVANIA STATE POLICE
BUREAU OF RESEARCH AND DEVELOPMENT

JANUARY 21, 1998

REPORT CONTENTS

Background	1
Clarification of Numbers of Full-Time Police Departments	1
Limitations of the \$468.09 Cost Figure	2
Allocation of Members	4
Redefined Cost Assessment	4
Distribution of Incidents and Calculated Costs	6
Municipalities over 9,000 in State Police Primary Jurisdiction	6
Enclosures (1) through (8)	
(1)	Troops, Stations, Trooper Complement Data, Vehicles, Percentage of Complement, Costs
(2)	Incidents by Station
(3)	Incident Classifications Deleted from Analysis
(4)	Incident Classifications Used in Analysis
(5)	Incidents Reported in Invalid Municipality Codes
(6)	Distribution of Incidents and Calculated Costs
(7)	Municipalities with no PSP Incidents
(8)	Municipalities with Populations Equal to or Greater than 9,000

BACKGROUND

House Resolution Number 167, adopted on June 17, 1997, provided for the appointment and assemblage of a Local Law Enforcement Task Force to conduct an investigation and prepare a report to the General Assembly concerning the alternative means by which law enforcement and police protection are being or may be provided to the more than 2,000 municipalities in Pennsylvania. On December 10, 1997, correspondence, detailing costs for police services to municipalities, was signed by Robert A. Bittenbender, Secretary of the Budget, and Colonel Paul J. Evanko, Commissioner of the Pennsylvania State Police. The correspondence was presented to the Local Government Commission at the HR 167 Task Force meeting held on December 11, 1997.

On December 18, 1997, correspondence was initiated by Virgil F. Puskarich, Executive Director of the Local Government Commission, to Major Wesley R. Waugh, Director, Bureau of Research and Development, Pennsylvania State Police, requesting clarification of the joint data submitted previously to the House Resolution 167 Task Force on the cost of providing State Police service to municipalities and the number of incidents handled by the State Police in 1996. An appended letter from the Honorable Thomas A. Tangretti, member of the House of Representatives from Westmoreland County, contained other areas for which clarification was requested. These two requests comprise the basis for the instant report.

CLARIFICATION OF NUMBERS OF FULL-TIME POLICE DEPARTMENTS

A question regarding the number of full-time police departments was also raised after task force members recognized that figures from differing sources contained different numbers. The Uniform Crime Reporting (UCR) program's primary objective is to inform the Governor, the General Assembly, other governmental officials, and the public as to the nature of the crime problem in Pennsylvania. The number of police departments with full-time police officers as listed in the 1996 Uniform Crime Report¹ includes college campus police, Conrail, county sheriffs, and other law enforcement agencies. Comparisons of UCR figures with numbers being quoted for municipal police departments is not a valid comparison because UCR recognizes any department that employs officers on a full-time basis as a full-time department. The Pennsylvania State Police defines a full-time department as any department that provides police services on a 24-hour-per-day, seven-day-per-week basis.

¹The 1996 Uniform Crime Report lists 857 departments with full-time officers.

LIMITATIONS OF THE \$468.09 COST FIGURE

The original data provided in conjunction with correspondence dated December 10, 1997, indicated an average cost of \$468.09 per incident for State Police responses. This monetary figure was an approximation based upon the best available computations within the State Police. The cost was for primary police services and did not include the costs for specialty services such as lab analysis, aviation, vehicles, facilities, etc. This figure was based upon all incidents handled by the State Police in both primary and non-primary jurisdictions.

It was recognized that the data collection processes currently utilized by the Pennsylvania State Police do not facilitate precise reporting of the specific data requested by the HR 167 Task Force; therefore, a great amount of manual data extraction has been required. It is not practicable to assign costs per occurrence as the exact amount of time expended by members working on specific incidents is unknown. Currently, an incident number is assigned to every incident brought to the attention of the State Police. This practice becomes problematic when attempts are made to measure the amount of time expended in the completion of major investigations. The Department's Automated Incident Memo System (AIMS) captures the precise amount of time which the primary responding officer devotes to the initial investigation; however, assisting members' time and hours devoted to follow-up investigations are captured on the Daily Report of Activities, a document which is manually prepared by members and on which dedicated time is rounded to the nearest hour. This collection method envelopes risks of significant unreported costs in major investigations such as homicides, Special Emergency Response Team (SERT) deployments, and aviation services, to name just a few instances. In the case of a homicide investigation, there could be dozens of members involved and yet only one incident number is assigned. For every additional officer that responds, there is also an increase in costs for equipment utilized. Finally, if any of the State Police operational Bureaus, such as the Bureau of Liquor Control Enforcement, Bureau of Drug Law Enforcement, or Bureau of Criminal Investigation handle an incident in the field and do not request assistance from the county Troop, the incident is not part of the cost analysis. The incident totals utilized represent county Troops' activities only² and were for the calendar year 1996. In addition, these costs were for primary police services only and do not include costs of vehicles or facilities.

The cost figure of \$468.09 was derived from the total operating budgets for the

²The fifteen county Troops are Troops A through R with the letters I, O, and Q not used. These Troops provide primary full-service police coverage to Pennsylvania's municipalities which do not have local police protection. Troop S, consolidated into adjacent county Troops during 1997, was dedicated to patrol of the interstate highway system. Troop T is dedicated to the Pennsylvania Turnpike System.

fifteen county Troops. The computations were based upon the projected operating budget for the 1998-99 fiscal year. The operating cost for the county Troops was divided by the total number of incidents for 1996³, to provide a cost per incident. These numbers were used to provide the most accurate cost assessment possible using this method. The projected cost which was submitted for the 1998-99 budget proposal is the exact cost incurred for the fiscal year 1996-97 by the county Troops. The incident totals were statewide incident totals. Every incident that was assigned an incident number in one of the county Troops was counted.

The problem with the cost tabulation method outlined above is obvious. All incidents, even those of a similar nature, are not equal in terms of complexity or time and resource requirements. Currently, the Pennsylvania State Police does not have the means to accurately capture the time expended or the number of personnel and equipment committed to each incident. Some sample situations which hamper cost estimation follow:

- A drug investigation often requires extended surveillance, wiretaps, and search warrants with multiple officers assisting. AIMS recognizes only one incident.
- Many State Police Stations are located within an area of non-primary jurisdiction (areas which have local police coverage and in which the Pennsylvania State Police is not the primary service provider). Every time an individual arrives on Station and requests fingerprinting or other services which are provided on the Station, such as Station tours, speeches, etc., an incident number is taken with the location being that of the Station. This artificially inflates the numbers in the Automated Incident Memo System for that municipality.
- If a State Police member sustains an injury or if Commonwealth property is lost or damaged, this cost does not appear anywhere in the incident system.
- Implicit within most requests for assistance from local police departments is the tacit acknowledgment that a particular incident in some fashion exceeds the resources of the requesting agency. It must be noted that the services being provided under these circumstances will most likely exceed any average cost figures because the recognition up front is that the incident is beyond a particular aspect of the resource capabilities of smaller agencies. Accident reconstruction, aviation services, criminal investigation assistance, and SERT callouts are prime examples.

³Tabulation of incident totals for 1997 is not yet complete.

ALLOCATION OF MEMBERS

In November 1992, the Department implemented a new manpower allocation strategy. This State Trooper Allocation Formula (STAF) replaced fixed complement tables for Troops and Stations which had been in place since the early 1970s. STAF is a workload measure that is time-based, seeking to equalize obligated time on a statewide basis. Theoretically, if obligated time were equal among Troopers on patrol, every member on patrol should work equally as hard. The implementation of STAF initiated a staffing procedure which directly related every Station's complement to its workload.

Since the original meeting of the House Resolution 167 Task Force, work has continued to refine the cost estimates for police services. In pursuit of an alternative approach to estimating State Police service costs, the STAF formula was applied to the overall operating budgets for the county Troops. It was postulated that if a particular Station had 10% of the total complement, it is logical to estimate that they would expend 10% of the operating cost.⁴ Since the STAF formula already links complement to workload, the revised data reflects the same system of weighting incidents that the State Police uses to determine its human resource allocations. While this cost calculation method is still an estimate of actual costs, the Pennsylvania State Police believes its results to be an improvement on the data previously submitted.

REDEFINED COST ASSESSMENT

This report includes a number of attachments which represent the product of the efforts to refine cost estimates:

- Enclosure (1) contains the names of every Pennsylvania State Police Station within the state. Contained therein are columns that reflect the number of patrol Troopers assigned to each Station based upon STAF; the number of criminal investigation

⁴This formula also recognizes that certain Stations are minimum staffed Stations. At such a Station, although the workload does not justify the number of members there, it is necessary to keep a predetermined number of members there in order to operate 24 hours a day, seven days a week. This then reduces the number of members available to be distributed to the other Stations. Currently there are 15 minimum staffed Stations throughout the state. If the operating costs of minimum staffed Stations were passed along to individual municipalities, the municipalities would have to shoulder an increased cost per capita to maintain the status quo.

Troopers assigned to each Station⁵; the corresponding number of vehicles to which the Station is entitled based upon their Trooper numbers; the percentage of the total Trooper complement that is on the specific Station; the corresponding percentage of the budget assigned to the Station; and the total cost assigned to the Station with the cost of vehicles included.

- Enclosure (2) lists every Pennsylvania State Police county Station within the Commonwealth along with the corresponding number of incidents for which a cost is assessed. It is based upon this number that the percentage workload for the Station was determined and the corresponding operating cost of the budget was assigned. This indicates that portion of the overall workload that was done by the particular Station.
- Enclosure (3) contains a listing of those incidents which by their very nature are not within the control of the municipality when the Station is located within their boundary. These incidents are taken at the Station and contain the Station address. This artificially inflates that municipality's workload. Examples of this would be a State Department investigation, request for fingerprints, Station tours, or a municipal police agency serving a warrant in an area of State Police jurisdiction. All of these incidents were deleted from the total workload numbers.
- Enclosure (4) contains the list of incidents included in the incident totals for an individual municipality.
- Enclosure (5) depicts all of those incidents for which an invalid municipality code was assigned. There was a total of 7369 incidents lost through the assignment of an invalid code. This represents approximately 1.6% of the total incidents used to compute the cost assessment.
- Enclosure (6) contains a list of every municipality in the State in which the Pennsylvania State Police responded to an incident and the related information which were considered in determining the appropriate cost to be assessed.
- Enclosure (7) lists all of those municipalities in which no incidents were counted or reported to the State Police. Previously Enclosure (3) listed those incidents which were not counted against a municipality. Frequently a Station will handle an incident in another Station's area of jurisdiction. This happens when a citizen who is unfamiliar with the area shows up at the wrong Station to report an incident. These incidents have been included in totals for the Station having operational jurisdiction over the area the incident should have been reported. In addition, the

⁵The allocation of members to the criminal investigation functions is also workload-based.

municipality of occurrence would be assessed for the incident.

- Enclosure (8) contains the names and pertinent information relating to those municipalities whose population is equal to or greater than 9,000.

DISTRIBUTION OF INCIDENTS AND CALCULATED COSTS

A further explanation of Enclosure (6) will provide a better understanding of the costs to be assessed against the municipality. For all 1996 incidents, the enclosure shows the State Police Station having jurisdiction; the county; name of municipality; number of incidents handled by State Police in the municipality; total number of incidents handled by the Station; number of Troopers on that Station; Station percent of total Trooper complement; the Station's operating cost; the percent of incidents occurring in the specific municipality; the corresponding percent of the Station's operating cost assigned to the specific municipality; population; and primary or non-primary jurisdiction which indicates if the Pennsylvania State Police provides primary coverage.

A review of Enclosure (6) will result in a notation that several areas of non-primary jurisdiction have a significant number of incidents. This is due in large part to interstate highways, which the State Police patrol, passing through areas of non-primary jurisdiction which are handled by municipal police agencies. These occurrences are predominantly in the Philadelphia and Pittsburgh areas. The Department is not attempting to charge for our specialty services including our laboratory services. These are services which the Department currently provides on an as needed basis to the law enforcement community.

MUNICIPALITIES OVER 9,000 IN STATE POLICE PRIMARY JURISDICTION

Enclosure (8) contains the names and pertinent information relating to those municipalities whose population is equal to or greater than 9,000. The costs here, as in the rest of the report, have been depicted as they relate to the municipality and not the individual populous. In addition, costs have not been broken down into individual incident classifications due to the inability to accurately measure personnel time and other resources devoted to the investigation of each specific incident. The Department's STAF project reflects the workload at each Station within the Commonwealth. It is upon this premise that the computations for cost assessment were based. It is reasonable to assume that if the workload of a Station calls for a specific percent of the Department's total complement, this same Station will consume an equal portion of the Department's operating budget. In the enclosure, each municipality was then assessed a portion of the Station's budget based upon the percent of incidents that occur within that municipality.

This more accurately reflects the amount of time expended in that municipality handling investigations than did previous attempts at cost calculation.
